

Figure 1. Comparison of the mean length of topsmelt (*Atherinops affinis*), northern anchovy (*Engraulis mordax*) and queenfish (*Seriphus politus*) caught in four different seasons in Los Angeles Harbor, California, U.S.A. in 2003 (N=10).

Table 1. Comparison of the mean fork length and range (in parentheses) of topsmelt (*Atherinops affinis*), northern anchovy (*Engraulis mordax*) and queenfish (*Seriphus politus*) caught in four different seasons in Los Angeles Harbor, California, U.S.A. in 2003 (N=10).

Species	Season			
	Spring	Summer	Fall	Winter
topsmelt (cm)	5.9 (2 - 9)	10.6 (6 - 18)	20.3 (8 - 33)	4.1 (1 - 9)
northern anchovy (cm)	21.1 (11 - 33)	11.8 (7 - 19)	7.9 (3 - 13)	15.0 (7 - 29)
queenfish (cm)	10.1 (3 - 21)	11.6 (2 - 30)	11.0 (3 - 30)	10.6 (2 - 19)
